¹ In 1952 gross value of products was replaced by value of factory shipments; see text on pp. 624-625.

Detailed Statistics by Group and Individual Industries.—Table 11 presents for the year 1953 detailed statistics regarding the individual industries under which all industrial plants in Canada are classified. The industries are assembled under seventeen main groups according to the Standard Industrial Classification.

In interpreting the statistics of individual industries it should be remembered that the figures on employment, production, etc., do not refer to individual products but to all the products made in an industry. For example the value of production of the confectionery industry amounting to \$98,782,944 in 1953 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product is confectionery had a value of production of \$98,782,944. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as ice cream which was valued at \$2,912,810 and bread and other bakery products valued at \$2,688,068. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. The quantities and values of the principal individual commodities produced are given in Table 12. Commodities produced in small quantities are not included but the list covers approximately 75 p.c. of total production.
