**Section 2.—The Construction Industry**

**Subsection 1.—Value of Construction Work Performed**

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.\* The data represent the estimated total value of all new and repair construction.

Canada's intended construction program for 1957 is estimated at \$6,702,000,000, about 5 p.c. above the 1956 level. This contrasts with a rise in 1956 of more than \$1,000,000,000 or 20 p.c. over the 1955 realization of \$5,311,000,000. New construction in 1957, estimated at \$5,563,000,000, is expected to account for most of the increase. The value of repairs to be undertaken in that year is estimated at \$1,139,000,000.

\* An explanation of sources and methods is given in the 1955 Year Book, p. 727, and DBS annual report *Construction in Canada*.
