## 19.-Estimates of Population, by Province, Intercensal Years 1941-58-concluded

Table 20 shows the natural increase and the total population increase according to the census for Canada and the provinces in the periods 1931-41, 1941-51 and 1951-56. The difference between the natural increase and the total increase in population during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

The earlier movement of population on the North American Continent from east to west has not been apparent in Canadian statistics in recent years. The most spectacular changes are shown in the Prairie Provinces and in British Columbia. While the three Prairie Provinces lost by migration about 250,000 persons between 1931 and 1941 and somewhat more from 1941 to 1951, they gained in the period 1951-56. Manitoba lost over 100,000 population between 1931 and 1951 but only 152 persons between 1951 and 1956. Saskatchewan has been a consistent loser since 1931, losing on the average over 15,000 a year during the 1930's, almost 20,000 a year during the 1940's and just under 8,000 a year during the 1950's. Alberta lost over 40,000 persons in the decade 1931–41 but only about 7,000 in the next decade and gained close to 65,000 in the five years 1951-56. British Columbia gained through migration at the rate of about 8,000 persons a year during the 1930's, about 23,000 a year during the 1940's and about 27,000 a year in the first half of the 1950's. On an absolute basis Ontario received more people through migration than did British Columbia but, in relation to its larger population, the gain was only about one-third as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss between 1931 and 1951 and a considerable gain in the next five years. Nova Scotia gained population through migration during the 1930's but has been losing ever since; the Maritimes as a whole lost 138,000 persons over the quarter-century.
