<sup>1</sup> Includes 1956 data for two hospitals that did not report later data.

<sup>2</sup> Includes 1956-57 data for seven hospitals that did not report later data.

**Tuberculosis Sanatoria and Units.**—The effects of the development of new therapeutic techniques were in evidence at the end of 1957. At that time the number of beds devoted to care of the tuberculous in Canada was only 15,958, a drop of 1,725 in three years. Table 8 indicates the provincial distribution of the bed complement and its location in various types of institution. Table 9 gives information on patients, personnel and facilities. Patient-days were down by 9.2 p.c. from 5,250,555 in 1956 to 4,766,306 in 1957, and personnel (in sanatoria only) dropped 2.8 p.c. from 9,739 to 9,464. Finances of public sanatoria are covered briefly in Table 10.
