Section 2.—The Construction Industry

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Canada's construction program for 1959 is estimated at \$7,129,000,000, slightly above the 1958 total. Repair construction, estimated to be about \$37,000,000 higher than in 1958, more than accounted for the advance; the value of new construction was lower by about \$33,000,000.
