7 are caused by rounding of figures.

<sup>2</sup> Slight differences in totals from those shown in Table

## Section 2.—Construction Statistics

## Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.\* The data represent the estimated total value of all new and repair construction performed by contractors; labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Canada's construction program for 1960 is estimated at \$6,889,000,000, slightly below the 1959 total. Repair construction is estimated to be about \$33,000,000 higher than in 1959, and the value of new construction lower by about \$222,000,000.

\* An explanation of sources and methods is given in DBS annual report *Construction in Canada* (Catalogue No. 64-201).

## 10.—Value of New and Repair Construction Work Performed, 1951-60

NOTE.—Actual expenditures 1951-59; preliminary actual 1960.

| Year      | New        | Repair     | Total      | Total Construction as<br>Percentage of Gross<br>National Product |
