<sup>1</sup> Mainly hotels, restaurants, laundries, dry-cleaning establishments and business and recreational services.

**Subsection 3.—Hours and Hourly Earnings, 1960**

Since the end of 1944, the monthly survey of employment and payrolls has also obtained, for wage-earners, statistics of hours worked and paid for during periods of absence with corresponding totals of gross wages paid to the wage-earners for whom records of hours are maintained. These are mainly hourly rated or production workers; the necessary information on hours is frequently not kept by employers for ancillary workers or, in many establishments, for any wage-earners. Salaried employees are excluded by definition from this series. In a number of industries, precise records of hours worked are lacking, with the result that data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.
