

private intercity trucks, 35.9 p.c. were private trucks operated predominantly within urban areas, and 34.4 p.c. were farm trucks. One-third of the total number were registered in Ontario and one-half were registered in the two provinces of Ontario and Quebec.

Canadian registered trucks travelled 6,616,000,000 miles in Canada during the year, of which mileage 20 p.c. was accounted for by for-hire trucks, 33 p.c. by private intercity vehicles, 32 p.c. by urban trucks and 15 p.c. by farm trucks, the most numerous of all vehicles.

For-hire trucks averaged 184,700 net ton-miles per vehicle and, although amounting to only 5.9 p.c. of total registrations, they accounted for 60 p.c. of the total net ton-miles performed by all commercial trucks in Canada, a result of the comparatively high average yearly mileage of for-hire trucks and also of the heavier average load carried (9.9 tons as compared with an average of 4.7 tons for all trucks). The predominance of heavier vehicles in the for-hire group also explains the low mileage per gallon of gasoline of 6.3 as compared with an average of 9.7 for all vehicles.

**Motor Vehicle Accidents.**—Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. Statistics on all deaths from motor vehicle accidents are shown in Table 15. A direct comparison of such statistics between the provinces is of little value because of differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has been tabulated. These data still give no weight to differences in use of motor vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents.
