any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

Section 7.-International Comparisons of Vital Statistics

Table 33 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by three countries—Venezuela, Japan and the Union of Soviet Socialist Republics—and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking eighth among those listed. However, 16 countries reported lower or equal rates of infant mortality, some as low as 14 or 15 per 1,000 live births (Netherlands and Sweden), half of Canada's rate of 28.
