Section 4.—Selected Characteristics of the Manufacturing Industries—Ownership, Employees and Factory Shipments

This Section includes a number of classifications and cross-classifications of the manufacturing industries according to type of ownership, employees and value of shipments. Table 13 shows the distribution of establishments, employees and shipments by type of ownership and size of establishment. As is to be expected, the smaller establishments, regardless of the type of products manufactured, are operated mainly under individual ownership or partnerships. Industries conducted on a small scale usually contain a large number of establishments in this category, the percentage decreasing as the scale of operation increases; with the increase in size, the importance of individual ownership as well as that of partnerships declines. For incorporated companies, however, the opposite is true; as the size increases their importance increases—numerically and also as employers and producers.
