

dairy products was highest in the \$5,000 to \$5,999 group where average family size was greatest. The only food group in which increasing income was accompanied by a consistent decline in expenditure per family and per person was eggs, although fats and oils showed a declining tendency on a per-person basis. Expenditure on meats and poultry was approximately the same per person in the lowest and highest income groups, although the proportion of total expenditure declined from 30.2 p.c. to 25.9 p.c.

### 11.—Average Weekly Food Expenditure in Seven Cities, 1962
