Zinc.—New mines in Eastern Canada, particularly in Quebec and New Brunswick, were mainly responsible for the large increase in shipments of zinc in 1964, an increase that made Canada the world's leading producer of this metal. Quebec is now Canada's largest producer, accounting for 33.5 p.c. of the total 1964 output compared with British Columbia's 30.4 p.c.

14 .- Producers' Shipments of Zinc, by Province, and Total Value, 1955-64

Gold.—Over the ten-year period 1955-64, Canada's annual gold production fluctuated narrowly around the 4,000,000-oz.t.-mark and its value around \$150,000,000. The high value reached in 1961 was followed by three successive annual declines, the quantity produced in 1964 being almost 15 p.c. lower than the 1961 total. Most of this decrease took place in the major producing provinces of Ontario and Quebec, although output in all producing areas was lower except the Atlantic Provinces and the Northwest Territories; the latter, which is the third highest producer, recorded a 2-p.c. increase in this comparison. In 1964, Ontario produced 56.0 p.c. of the Canadian output, Quebec 24.8 p.c., the Northwest Territories 10.9 p.c. and British Columbia 3.5 p.c.
