The amounts and percentages of domestic and imported coal apparently consumed in Canada in the years 1955-64 are shown in Table 25. The imports represent amounts taken out of bond for consumption during the respective years, regardless of when received. Thus, the totals are exclusive of coal landed at Canadian ports and re-exported or exwarehoused for ships' stores without being taken out of bond.

<sup>&</sup>lt;sup>1</sup> The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported. <sup>2</sup> Imports of briquettes are not included in this table but are shown separately in Table 24. <sup>2</sup> Deductions have been made from this column to take account of foreign coal re-exported from Canada; bituminous coal ex-warehoused for ships' stores was deducted for the years prior to 1964.

Petroleum.—The upward climb of crude petroleum production which started with the discovery of the Leduc field in Alberta in 1947 halted temporarily in 1958 but resumed in 1959 and continued in subsequent years. Quantity production in 1964 reached a record level, about 16,000,000 bbl. higher than in 1963. Over 64 p.c. of the output was contributed by Alberta.
