Subsection 2.—Fish Products

According to commodity surveys conducted by the Dominion Bureau of Statistics, the value of sea and inland fish products produced at all industrial levels, including the value to fishermen, amounted to \$264,158,000 in 1963; this was an increase of 1 p.c. over 1962 and the highest amount on record. Most of the increase over 1962 took place in the Atlantic Provinces.

4.—Value of All Products of the Fisheries, by Province, 1959-63

Note.—Figures for the years 1917-58 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition. Totals for five-year intervals from 1870 are given in the 1956 edition, p. 597.

Province or Territory	1959	1960	1961	1962	1963

Includes landings by Canadian fishermen in United States ports.
2 Totals differ from the sum of provincial totals because duplications resulting from inter-shipments between provinces are removed.

The annual output of canned salmon fluctuates considerably with the extent of the catch, as is shown in Table 5. This product has long been the most important of the industry, but the demand for Atlantic Coast frozen groundfish fillets and blocks has been rising so rapidly that the value of these products now runs a close second. In fact, in 1960 and 1963, years of low canned salmon production, the value of the Atlantic products was in first place.
