

Age-old occupations are undergoing radical change and new occupations are emerging.

The use of heavy machinery and of pre-prepared and prefabricated materials has changed the job of the construction worker and has reduced the size of crew required on any type of construction project, whether building or engineering.

The computer is becoming commonplace in both management and production areas. Keeping a large one busy requires the skills of a variety of specialists—economists, mathematicians, engineers, operations researchers, computer analysts, financial planners and statisticians—as well as of highly trained operators.
