

The total income of all public hospitals in 1965 was \$1,290,000,000, an increase of 12.4 p.c. over 1964. Table 10 shows that approximately 90 p.c. of this revenue was derived from net in-patient earnings in most types of hospitals. Total expenditure also rose by 12.4 p.c. from 1964 to \$1,342,500,000 in 1965. Gross salaries and wages accounted for between 60 p.c. and 70 p.c. of total expenditures of all types of hospitals. Table 11 shows that gross salaries and wages made up a smaller proportion of total expenditures in public general hospitals in the Atlantic Provinces than in the Central or Western Provinces in 1965.

The cost per patient-day of care in public general hospitals rose by 9.8 p.c. from \$31.00 in 1964 to \$34.05 in 1965. Table 12 shows how cost per patient-day increased with bed size in public general hospitals from \$23.43 in the 1-9 bed size to \$40.97 in hospitals with 1,000 or more beds. Provincially, cost per patient-day in public general hospitals ranged from \$24.40 in Prince Edward Island to \$41.06 in Quebec, as shown in Table 13.

10.—Revenues and Expenditures of Operating Public Hospitals, by Type, 1965

NOTE.—Figures include estimates for non-reporting hospitals.
