<sup>1</sup> Used in farm butter only.<sup>2</sup> Includes values of skim milk and buttermilk retained on farms.

In 1966 the output of butter continued the declining trend in evidence for a number of years. Creamery butter production has decreased 7.6 p.c. since 1962 and farm-made butter has shown a much more significant change, dropping 50 p.c. in the same period. The 1966 output of creamery butter, which amounted to 334,000,000 lb., accounted for 7,819,000,000 lb. of milk or 42.6 p.c. of the national milk output and 69.0 p.c. of the milk used in dairy factory products. The production of farm butter accounted for only 77,000,000 lb. of milk or 0.4 p.c. of the national output. Per capita consumption of creamery butter was 17.42 lb. in 1966 compared with 18.17 lb. in 1965.
