Newfoundland and Labrador.—The mineral output of this province continues to be one of the most rapidly growing of all provinces or territories mainly because of increased iron ore production from Labrador. Total production in 1966 was valued at \$244,020,000 compared with \$207,558,000 the previous year and metallics output increased to \$225,338,000 from \$188,173,000. Iron ore contributed \$188,603,000 of the 1966 total, nearly \$32,000,000 more than in 1965. Of the more than 16,546,000 long tons of iron ore shipped, about 4,000,000 tons consisted of direct shipping ore from near Schefferville, Que.; about 7,000,000 tons were pellets and some concentrates from the Carol Lake project of Iron Ore Company of Canada at Labrador City; and most of the remainder was shipments of concentrate from Wabush Mines at Wabush in Labrador. Wabana Mines Division of Dosco Ltd. ceased operations on Belle Island near St. John's after more than 70 years of continuous operations. Plans were announced to increase the capacity of the Carol Lake project from 7,000,000 to 10,000,000 long tons a year and the Wabush Mines facilities from 6,000,000 to 7,000,000 long tons a year.

Production of copper, zinc and lead, mainly from the Buchans Mine of American Smelting and Refining Company, was valued at \$17,415,000, \$10,316,000 and \$6,500,000, respectively. Four other mines also produced copper concentrates from plants having mill capacities ranging from 1,150 tons a day to 2,250 tons a day and at least two other areas of copper mineralization were being explored by diamond drilling. Asbestos output from the Baie Verte deposit on the Island of Newfoundland was slightly more than 57,000 tons worth \$9,301,000. The total value of non-metallics output in 1966, at \$12,974,000, was down only slightly from the previous year and the value of structural materials output, at \$5,708,000, was also down slightly.
