Stone.—Stone quarrying and stone products are the two main divisions of the stone industry, which had an output valued at almost \$105,000,000 in 1966. Stone quarrying comprises the production of rough blocks and crushed materials from ledgerock deposits and intrusive and extrusive igneous deposits. Dimension stone products, including dressed building, ornamental and monumental stones, flagstone, curbstone and paving block, account for approximately 7 p.c. of the total value of stone production. Crushed stone products, consisting of materials used for concrete aggregate, railway ballast, road metal, rubble and riprap, terrazzo, stucco and artificial stone, etc., account for about 78 p.c. of the total value. The remaining 15 p.c. is attributable to materials used in the chemical and allied industries.
