 certain tables may not add due to rounding

All figures of the 1971 Census in Tables 5.11 to 5.13, 5.15 to 5.16, and 5.23 to 5.30, have been subjected to a confidentiality procedure to prevent the possibility of associating small figures with any identifiable individual. The particular technique used is known as "random rounding". Under this method, all last or "unit" digits in a table (including all totals) are randomly rounded (either up or down) to "0" or "5". This technique provides the strongest possible protection against direct, residual, or negative disclosures without adding any significant error to the census data. However, since totals are independently rounded they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census tabulations.

## 5.1 Growth of the population of Canada, Census years 1851-1971

Census year	Population No.	Increase during intercensal period		Average annual rate of population growth %
		No.	%	
1851	2,436,297			
1861	3,229,633	793,336	32.6	2.9
1871	3,689,257	459,624	14.2	1.3
1881	4,324,810	635,553	17.2	1.6
1891	4,833,239	508,429	11.8	1.1
1901	5,371,315	538,076	11.1	1.1
1911	7,206,643	1,835,328	34.2	3.0
1921	8,787,949	1,581,306	21.9	2.0
1931	10,376,786	1,588,837	18.1	1.7
1941	11,506,655	1,129,869	10.9	1.0
1951 <sup>1</sup>	14,009,429	2,502,774	21.8	1.7
1961	18,238,247	4,228,818	30.2	2.7
1971	21,568,311	3,330,064	18.3	1.7

<sup>1</sup> 1951 Census figures include Newfoundland for the first time. Excluding Newfoundland the increase would have been 2,141,358 or 18.6%.

## 5.2 Growth components of Canada's population, 1851-1971

<sup>1</sup> Series A assumptions:

1. Mortality: expectation of life at birth will remain unchanged at 69.86 years for males and 75.75 years for females.
2. Fertility: will change from 2.19 children in 1971 to 1.90 in 1985 and then remain constant.
3. Migration: zero net migration.

<sup>2</sup> Series B assumptions:

1. Mortality: expectation of life at birth will increase gradually to 76.7 years for males and 84.5 years for females by 2001.
2. Fertility: will change from 2.19 in 1971 to 2.13 in 1985 and then remain constant.
3. Migration: net migration of 60,000 per year.
