**Imports from Principal Countries.**—The following statement on imports from twelve leading countries shows how predominant the two great English-speaking countries are as the source of supply of Canadian imports, the United States supplying approximately 58 p.c. of all our imports in 1935, while the United Kingdom, with less than half the share of the United States in our import trade, has, nevertheless, more than ten times as large a share as Germany, ranking third. While France still ranked fourth in supplying Canada with goods, imports from France show a declining trend both in actual value and in percentage of the total, so much so, that, although in 1932 France ranked third, in 1935 France was almost displaced from fourth position by British India which is increasing in importance as a source of imports. Japan and the Netherlands have dropped from fifth and sixth positions, respectively, in 1932 to ninth and tenth in 1935. The following statement outlines the imports from twelve leading countries, while in Table 19 of this chapter actual figures will be found showing imports from all important countries of the world in each of the last five fiscal years.
