¹ Includes Yukon Territory; no production recorded in that Territory in later years.

In 1951, on the basis of marketed value, salmon was far ahead of all the other leading species of fish, strengthening its traditional position. Lobsters and cod were tied for second place, while herring was not far behind. Most of the main species showed increases in 1951 compared with 1950.

Table 4 shows the quantities of the main species of the commercial fisheries landed (primary products only) and values marketed (primary and secondary products). Minor items, and secondary products not specifically derived from one particular kind of fish, are grouped in the item "Other"
