

Three provinces accounted for 81 p.c. of the total marketed value of fisheries products in 1952; British Columbia's share was 39 p.c., a substantial decrease from the previous year, followed by Nova Scotia with 28 p.c. and New Brunswick with 14 p.c.

2.—Marketed Value of All Products of the Fisheries, by Province, 1948-52

NOTE.—Figures for the years 1917-47 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition.

In 1952, salmon was still the most valuable of all the leading species of fish, even though both the quantity landed and the marketed value were lower than in the previous year. Lobsters, cod and herring followed in that order. The most notable decline occurred in the quantity and value of herring.

Table 4 shows the quantities of the main species of the commercial fisheries landed (primary products only) and values marketed (primary and secondary products). Minor items, and secondary products not specifically derived from one particular kind of fish, are grouped in the item "Other".
