A survey of weekly earnings of salaried employees, classified by (1) managerial and professional employees and (2) office workers, was made for the first time in 1951; it will be repeated every third year. Results of the 1951 survey show that weekly earnings for both sexes in 1951 averaged \$98.38 for managerial and professional employees and \$51.14 for office workers. Newfoundland with \$116.20 for both sexes was the highest paying province as regards managerial and professional employees, while British Columbia with \$55.75 was the highest paying province for office workers.

In the managerial classification, male employees in the paper products group were the highest paid, followed by textile products (except clothing), transportation equipment and iron and steel products. Managerial employees in the tobacco products group were the lowest paid. In the same category, female employees in the transportation equipment group were the highest paid and those in the miscellaneous group were the lowest paid.

As for office workers, the tobacco products group paid the highest salaries to both men and women and printing, publishing and allied industries paid the lowest salaries to men and leather products industries the lowest to women.
