

Changes in the pattern of the construction program illustrating where shifts within the program are occurring from year to year are given in Table 11. For example, of the \$182,000,000 increase in building construction indicated for 1954, \$48,000,000 is accounted for by housing, \$29,000,000 by stores and \$59,000,000 by hospitals. These increases are offset by a \$30,000,000 decline in construction for factories, plants and workshops.

11.—Dollar Change in Value of Construction Work Performed, by Type of Structure, 1952 to 1953 and 1953 to 1954
