

The figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except for meats, where the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out that there are minor discrepancies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers were not available.

All basic foods have been classified under 13 main commodity groups. Totals for each group have been computed using common denominators for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods have been included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 43 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the years 1952, 1953 and 1954.

43.—Per Capita Supplies of Food Moving into Consumption 1952-54 and Average for 1935-39

Kind of Food and Weight Base	Pounds per Capita per Annum				Percentages of 1935-39 Average		
	Average 1935-39	1952	1953	1954	1952	1953	1954
Cereals..... Retail wt.	205.7	167.5	162.3	165.5	81.4	78.9	80.5
Flour (including rye flour) ¹	184.8	151.6	145.4	147.6	82.0	78.7	79.9
Oatmeal and rolled oats.....	7.3	5.5	5.2	5.7	75.3	71.2	78.1
