sider only those in the main productive 40 year period between 25 and 64 years old inclusive. Thus Canada is shown by its statistics to be emphatically, in so far as the males are concerned, a workers' country.

Female Labour. - The growth of the employment of females in gainful occupations between 1891 and 1911 is shown in Table 2. The figures found there may be supplemented by the information that in $1891,11.07$ p.c., in $1901,12 \cdot 01$ p.c., in $1911,14 \cdot 31$ p.c. of the female population 10 years old and over were gainfully employed -an increase from one-ninth to one-seventh of the female population of these ages during the 20 year period-a rate of increase which, in view of the labour conditions of the war and reconstruction period, will probably be found to have been maintained in the present decade.

It is significant that among females the age period during which there is the maximum of gainful employment is shown by the census to be that from 15 to 24 years inclusive. Of the female population of these ages, 27.78 p.c. were in 1911 gainfully employed, a percentage which fell to $12 \cdot 14$ p.c. for the period 25 to 64 years inclusive. As every employer of female labour knows; the decline is due to the absorption of female labour by marriage and home duties.
