Résumé de la statistique manufacturière.—Les chiffres du tableau 4 illustrent aussi clairement que possible les tendances des industries manufacturières du Canada au cours de la plus récente période de leur évolution. Dans une analyse des statistiques de la production et des matières premières employées, il faut se rappeler que, par suite de l'inflation des valeurs de 1914 à la période qui a suivi immédiatement la guerre et de la baisse des prix qui a marqué les dépressions de 1921 et 1930, les chiffres de ces années ne sont pas tout à fait comparables. Il existe cependant un chiffre très important, qui illustre clairement la tendance du
